

SERB IRHPA and CRG Calls on COVID-19

COVID-19 HPC consortium

If you need computing resources for your proposed research and development SERB (IRHPA or CRG) project directed toward coronavirus and other respiratory virus infections, you may evaluate the **COVID-19 HPC consortium**, a High Performance Computing consortium formed to empower researchers around the world to accelerate understanding of the COVID-19 virus and the development of treatments and vaccines to help address infections. The consortium encompasses computing capabilities from some of the most powerful and advanced computers in the world. For teams who receive Consortium access, after their proposals are reviewed by consortium staff are expected to publish their results in the open scientific literature. Proposals to request access to resources of the COVID- 19 HPC Consortium must have a short description, no longer than three pages, of the proposed work sans proprietary information.

This will be applicable to **approved** SERB IRHPA or CRG proposals.

The information areas sought for review, and other details can be accessed here <https://www.xsede.org/covid19-hpc-consortium>
